Mike;

In our Jan 18th meeting, right around the 48 minute mark, you and I had a discussion concerning vertical migration of soils caused by bees at the middle School.

EPA had done a Removal Action in the playground at the school and you claimed the contamination came from the adjacent ampitheater and drive path.

I built that ampitheater and we spread the extra soil all the way to the playground. This soil was carved right out of the bank, it had never been disturbed.

There is only one way that the contamination could have come from that direction on that site...there is a big pile of bark from OU-5 on the ampitheater.

You may or may not be aware that the release of contaminated material from OU-5 has become a big issue. I believe you admitted that it contaminated the Middle School playground area.

What work did EPA do outside of the playground area at the Middle School? Did you test the bark from OU-5?

Also, at the end of that conference you detailed some previous removal actions around the David Thompson Search and Rescue building. I asked why those removal actions were not added to the remedial Investigation. You said, "I don't know". Can you find out why those actions were not detailed in the RI?

Thank You, DC Orr
